KEYMACRO is a windows application developed with.NET Framework. The application is a software package that allows the users to create user interfaces for Enterprise applications. This product is optimized to support client user interfaces. The user interfaces can be built from Windows Forms, and WPF. Built-in visual tools: Designers can create new forms and layout dialogs using the tools that are built into the application. The design of the forms and windows can be managed in either graphical or code-based way. They can be saved and loaded into the application. Integrated search and navigation: KeyMacro allows the user to look for controls and events that are exposed by a particular UI element. An efficient navigation is provided using search and find buttons. Customizable toolbars: The user can add or remove toolbars with a set of controls. They can be arranged as per the preference. A button can be added to the toolbar to show the context sensitive menu. GUI controls: A number of controls including buttons, checkboxes, grids, menus, and listboxes are provided to edit, view, and display data. It also provides simple data binding and editing functions. Tab control: The application provides a tab control that allows the users to add a set of controls into the form as tabs. This is useful for displaying multiple views. The tabbed controls can be removed and rearranged. Graphical views: The built-in views are enough to create the UI screens that are needed to display data, images, charts, etc. There are multiple options for different screen layouts including a tabbed control for a view with a number of dialogs. The layout of dialogs can be customized using the property sheet. Simple and easy to use The application has only minimal system requirements that include.NET Framework 3.5 or later and Windows OS. Webster Electric Co. Inc. Domain: www.webelectric.com A: AIST is better. A: I'd strongly recommend you get a copy of A-Cat. It's a proprietary version of the AT-61 (from a different vendor) and provides very similar functionality, plus some extra bells and whistles. I've used A-Cat extensively and highly recommend it. It's a bit pricy, but if you're working on IEC 61508, it's worth it. Q: Sorting an array of objects using Natural Ordering. I have an array of objects that I am trying to sort by the key (numeric) using the built in sort and then sort functions. How would I sort this array by the key ascending and then by the key descending? function bubbleSort(arr) { for(var i=0;i arr[j+1].value) { //var tmp = arr[j]; arr[j] = arr[j+1]; arr[j+1] = tmp; } } } return arr; } var arr = []; arr.push({name: "something"}); arr.push({name: "something else"}); arr.push({name: "something"}); arr.push({name: "something else"}); arr.push({name: "something"}); arr.push({name: "something else"}); console.log(bubbleSort(arr)); A: You can try to
