AVG Free Antivirus Description: AVG Free Antivirus is a freeware antivirus application that is meant for Windows and Linux. It comes with an interactive and easy to use interface, with two panes: one for the main information and one for the results. The main window is split in two panes: on the left you can see the list of installed programs, and on the right you can see the detailed information on all items that are under the scanner: program name, description, available actions, extension, version, publisher, public author, settings, etc. You can scan a single file or folder, or you can select a whole folder and it will be scanned. The application can also exclude a specific file. The application scans in real time, the scan duration can be set manually, and it can also save the scanned file to disk. You can start scanning by clicking on a button or by choosing to do so when you save a file or folder. The scan result page shows a list of entries and below is the detailed information on the detected items, including the file properties (size, creation date, modification date, etc.). You can also download the detected file to your computer, launch an analysis, view scan progress, etc. The application will show also the results of its analysis: virus total, number of infections, detection rate, etc. The main window can be docked to the task bar and it can be moved to the desktop or to the system tray. A tray icon will be shown in the system 81e310abbf
