It is the best choice if you would like to easily edit or create high quality images without spending lots of money. This guide is designed to help you find a solution to all your common Photoshop problems. 1. Convert a PNG or JPG to a Photoshop file When you convert PNG to a Photoshop file, you can use the File >> Save as option to save your work directly to Photoshop. Also, you can use Save for Web & Devices to save your images as Photoshop files. If you are about to use the Save for Web & Devices option, then you need to select a web browser from the Choose Web Browser option. The default web browser will already be selected if you opened the file earlier in a different browser. You can also install your preferred browser here. 2. Create an Adjustment Layer for an Image Adobe Photoshop CS6 introduced the option to apply an Adjustment Layer to an image. This useful layer will allow you to easily experiment with different adjustments to your image. After a layer is created, you can apply adjustments like Exposure, Levels and Curves to the layer in Photoshop. This method is not available in Photoshop Elements. 3. Create a Selection Mask When you select an area of an image, the selection mask automatically appears to control the selected area so that you can easily manage the selection mask by simply moving the selection mask to create the border around the selection. Adobe Photoshop Elements can do the same as Photoshop. This feature is also not available in Elements. 4. Use Image Filters Adobe Photoshop allows you to create a variety of filters and effects. You can create black and white images, apply blur effects, apply masks, change colors and many more effects. The filters that you can create in Photoshop are limited to black and white in Photoshop Elements. You can create blurs, retouch, change colors, and apply masks. However, you cannot apply filters like the Marquee tool. 5. Export an Image to a JPG or PNG When you export your image, you can choose between JPG or PNG. This guide discusses how to export an image as a PNG file. You can also use JPG. If you choose JPG, then remember to enable the JPG options in the options bar (Image >> Exported Content >> JPG/PDF Options). a681f4349e
