GIANT AntiSpyware is an anti-spyware and anti-malware tool that uses the latest technology to detect and remove malware, trojans, keyloggers and hijackers. It is so very easy to use because it's a wizard interface that walks you through all the steps required to scan and clean your computer. You can choose to scan your system from the Internet or from the local machine. This scanning process includes checking for malicious files (also known as Trojans, Worms, Viruses,

rootkits, Adware etc.) and cookies and also scanning for spyware (spyware is a program that snoops and records data from your computer without your permission). This program gives you an opportunity to deal with false positives. If it removes a program that isn't harmful, it doesn't leave any trace of that program on your PC. As a result, it often appears to be doing a good job, but be careful not to panic and delete every piece of software you find. In order to avoid this situation, GIANT AntiSpyware uses an intelligent system that detects strange behavior and helps you to clean the infections. You can also use this application to run any kind

of scan. Its target is not only to find the malicious files and spyware, but it also lets you scan your files, cookies, Registry, browser history, running processes, temporary files and logs. You can also remove toolbars and extensions. A: I've used several Anti Spyware programs and while they try to tackle the issue that you mention, most do not manage to balance in an effective way the necessity of not removing essential programs, versus the necessity to protect your system from being taken over and potentially hijacked by other programs. For this reason, I finally ended up writing my own Anti Spyware suite - because I

needed something that would support my requirements and that was effective. I hope you will find it useful. i n t e g e r ? 8 W h a t i s t h e s e v e n t h r o o t o f 6 4 5 6
