AutoCAD also has an optional add-on called 'AutoCAD Architecture (3D)', which is available for AutoCAD LT only. Benefits Many engineers, architects and other technical people consider using AutoCAD the most effective software for creating technical drawings, but the cost of the software is prohibitive to small and medium businesses, which generally do not have the large budget to spend on such expensive software. By contrast, a smaller team may find that the less costly alternatives are simply not suitable for their needs. Therefore, companies may choose between a software package suitable for a small team, for a medium sized team, or for a large team.
