Adobe Photoshop Movie Creator - It's really popular for creating videos from scratch as it offers several modules for anything from collages to animations. It's perfect for creating an animated explainer or a whole advert, movie or short video. The video editor makes it incredibly easy to pull clips into a video and reuse them. You can make something great in the next five minutes.

( CTO ) Adobe Creative Cloud - With this, you can easily access your latest work via a cloud storage. This feature is available on all products which will sync your files between the apps. The sync transfers your documents, images, and other assets from one location to another, and also saves you a complete backup.

( Salesforce ) Adobe Photoshop Experience Cloud - While on a trip, you can just connect from your mobile phone and make changes on the go, shared with all your colleagues. It becomes easy to perfect edits, and helps you to collaborate with your team. You can also put your canvas right in the cloud to connect in the best possible way. To complete my crazy journey with the brand new update, I ended up writing a whole new book showcasing the new creative tools in the latest version of Photoshop. This book will allow the reader to follow the journey with me through my photo alterations, including the five major ones that introduced new features to Photoshop:

- The introduction of Content-Aware Crop (a functionality that automatically detects the area of

an image that should be kept while removing the rest).

- The ability to use the content of one image to paint over another image.
- Placing one image on top of another.
- The ability to analyze the boundaries of light and dark areas on an image. This is a feature I've recommended for years, but I like the new approach, which I named Auto Mask, especially for landscapes.
- The introduction of Brush tool now available with an attachment for healing effects in the layers panel.
